

CYBER SECURITY PRACTICAL –LAB

ASSIGNMENT1

Title: Network Awareness and Port Security Using Nmap

Tool: Nmap

Instructor: Bijesh Thomas

OBJECTIVE

By the end of this 3-hour lab session, students will be able to:

- Identify live hosts in a network
- Detect open and closed ports
- Understand services running on a system
- Create an open port and then close it securely
- Develop basic defensive cybersecurity awareness

Rule: Students are allowed to scan ONLY their own system or college network. Scanning public websites or unknown IPs is strictly prohibited.

IMPORTANT TERMINOLOGIES

Term	Meaning
IP Address	Unique address of a device on a network
Host	Any connected device
Port	Digital door (0–65535)
Open Port	Accepts incoming connection
Closed Port	Exists but locked
Filtered Port	Blocked by firewall
Service	Program using a port
Firewall	Blocks unauthorized access
Subnet	Range of IP addresses
Localhost	Your own system (127.0.0.1)
Nmap	Network scanning tool

Write definitions for any 5 terms in your submission.

PART 1 – SETUP CHECK

Task 1: Check Nmap Installation

nmap --version

```
Nmap version 7.95 ( https://nmap.org )  
Platform: x86_64-pc-linux-gnu  
Compiled with: liblua-5.4.7 openssl-3.5.2 libssh2-1.11.1 libz-1.3.1 libpcap-1.10.5 nmap-libdnet-1.12 ipv6  
Compiled without:  
Available nsock engines: epoll poll select
```

Write your Nmap version: 7.95

Task 2: Find Your IP Address

Windows:

ipconfig

Mac/Linux:

ifconfig

```
(kali@kali)-[~]  
$ ifconfig  
eth0: flags=4163<UP,BROADCAST,RUNNING,MULTICAST> mtu 1500  
    inet 192.168.56.104 netmask 255.255.255.0 broadcast 192.168.56.255  
    inet6 fe80::f31d:5c4:11f8:6afe prefixlen 64 scopeid 0x20<link>  
    ether 08:00:27:1f:b7:23 txqueuelen 1000 (Ethernet)  
    RX packets 30 bytes 5140 (5.0 KiB)  
    RX errors 0 dropped 0 overruns 0 frame 0  
    TX packets 29 bytes 3722 (3.6 KiB)  
    TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0  
  
eth1: flags=4163<UP,BROADCAST,RUNNING,MULTICAST> mtu 1500  
    inet 10.0.3.15 netmask 255.255.255.0 broadcast 10.0.3.255  
    inet6 fd17:625c:f037:3:b9ae:a679:73be:9b46 prefixlen 64 scopeid 0x0<global>  
    inet6 fe80::85d4:f61b:9299:f033 prefixlen 64 scopeid 0x20<link>  
    ether 08:00:27:9e:40:30 txqueuelen 1000 (Ethernet)  
    RX packets 22 bytes 4043 (3.9 KiB)  
    RX errors 0 dropped 0 overruns 0 frame 0  
    TX packets 550 bytes 35721 (34.8 KiB)  
    TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0  
  
lo: flags=73<UP,LOOPBACK,RUNNING> mtu 65536  
    inet 127.0.0.1 netmask 255.0.0.0  
    inet6 ::1 prefixlen 128 scopeid 0x10<host>  
    loop txqueuelen 1000 (Local Loopback)  
    RX packets 8 bytes 480 (480.0 B)  
    RX errors 0 dropped 0 overruns 0 frame 0  
    TX packets 8 bytes 480 (480.0 B)  
    TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0
```

My IP Address: 10.0.3.15

Task 3: Find Your Network Range

Example:

If IP = 10.67.220.111

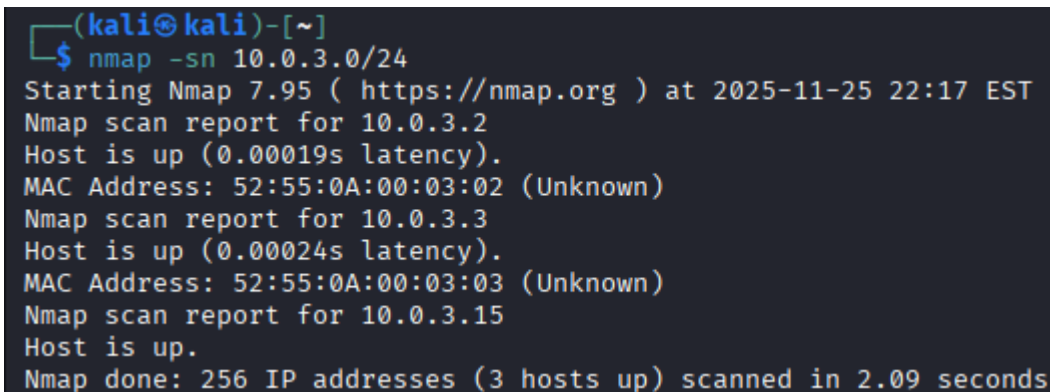

Then Network Range = 10.67.220.0/24

My Network Range: 10.0.3.0/24

PART 2 – NETWORK SCANNING

Task 4: Scan for Live Devices

`nmap -sn 10.0.3.0/24`

```
(kali㉿kali)-[~]  
$ nmap -sn 10.0.3.0/24  
Starting Nmap 7.95 ( https://nmap.org ) at 2025-11-25 22:17 EST  
Nmap scan report for 10.0.3.2  
Host is up (0.00019s latency).  
MAC Address: 52:55:0A:00:03:02 (Unknown)  
Nmap scan report for 10.0.3.3  
Host is up (0.00024s latency).  
MAC Address: 52:55:0A:00:03:03 (Unknown)  
Nmap scan report for 10.0.3.15  
Host is up.  
Nmap done: 256 IP addresses (3 hosts up) scanned in 2.09 seconds
```

Number of live devices found: 3

Write any 5 IP addresses found:

1. 10.0.3.2
2. 10.0.3.3
3. 10.0.3.15

Question:

How many devices are sharing your network?

Ans: there are total of 3 devices active in my NAT.

PART 3 – PORT SCANNING

Task 5: Scan Your Own System

Nmap 10.0.3.15

```
(kali㉿kali)-[~]  
$ nmap 10.0.3.15  
Starting Nmap 7.95 ( https://nmap.org ) at 2025-11-25 22:18 EST  
Nmap scan report for 10.0.3.15  
Host is up (0.0000060s latency).  
Not shown: 999 closed tcp ports (reset)  
PORT      STATE SERVICE  
22/tcp    open  ssh  
  
Nmap done: 1 IP address (1 host up) scanned in 0.17 seconds  
(kali㉿kali)-[~]
```

Port	State	Service
22/tcp	open	ssh

Question:

Why is it risky to have too many open ports?

Ans: Because there are vulnerabilities for many ports, and services that are running in them.

PART 4 – CREATE YOUR OWN OPEN PORT

Task 6: Open Port 8080

python3 -m http.server 8080

```
(kali㉿kali)-[~]  
$ python3 -m http.server 8080  
Serving HTTP on 0.0.0.0 port 8080 (http://0.0.0.0:8080/) ...  
█
```

Task 7: Confirm Port is OPEN

`nmap -p 8080 localhost`

```
(kali㉿kali)-[~]  
$ nmap -p 8080 localhost  
Starting Nmap 7.95 ( https://nmap.org ) at 2025-11-25 22:20 EST  
Nmap scan report for localhost (127.0.0.1)  
Host is up (0.000082s latency).  
Other addresses for localhost (not scanned): ::1  
  
PORT      STATE SERVICE  
8080/tcp  open  http-proxy  
  
Nmap done: 1 IP address (1 host up) scanned in 0.10 seconds
```

What happened to port 8080?

Ans: A service started running in that.

PART 5 – CLOSE THE OPEN PORT

Press in the first terminal window:

CTRL + C

Then run:

`nmap -p 8080 localhost`

```
(kali㉿kali)-[~]  
$ python3 -m http.server 8080  
Serving HTTP on 0.0.0.0 port 8080 (http://0.0.0.0:8080/) ...  
^C  
Keyboard interrupt received, exiting.  
  
(kali㉿kali)-[~]  
$
```

```
(kali㉿kali)-[~]  
$ nmap -p 8080 localhost  
Starting Nmap 7.95 ( https://nmap.org ) at 2025-11-25 22:21 EST  
Nmap scan report for localhost (127.0.0.1)  
Host is up (0.000048s latency).  
Other addresses for localhost (not scanned): ::1  
  
PORT      STATE SERVICE  
8080/tcp  closed http-proxy  
  
Nmap done: 1 IP address (1 host up) scanned in 0.09 seconds  
  
(kali㉿kali)-[~]
```

Why must we close unused ports?

Ans: Because Hackers can take advantage of the unmonitored ports to hack us.

FINAL REFLECTION

Write in your own words:

1. What did you learn today?

Ans: what's the basics of the nmap, and can open ports effect out network security.

2. How many unknown devices were on your network?

Ans: Total of 2 unknown devices were there in my network, one known was mine own.

3. Why is Nmap dangerous in the wrong hands?

Ans: Because it will let u know critical information which a hacker can use to cause harm to out networks.

4. How has this lab changed your view on cybersecurity?

Ans: To me it hasn't because, my view towards the Cybersecurity was already in the right direction to begin with.
